

Generative modeling in one dimension

Topics we'll cover

- ① Generative modeling at work
- ② The Gaussian in one dimension

A classification problem

You have a bottle of wine whose label is missing.

Which winery is it from, 1, 2, or 3?

Solve this problem using visual and chemical features of the wine.

The data set

Training set obtained from 130 bottles

- Winery 1: 43 bottles
- Winery 2: 51 bottles
- Winery 3: 36 bottles
- For each bottle, 13 features:
 - 'Alcohol', 'Malic acid', 'Ash', 'Alcalinity of ash', 'Magnesium',
 - 'Total phenols', 'Flavanoids', 'Nonflavanoid phenols', 'Proanthocyanins',
 - 'Color intensity', 'Hue', 'OD280/OD315 of diluted wines', 'Proline'

Also, a separate test set of 48 labeled points.

Recall: the generative approach

For any data point $x \in \mathcal{X}$ and any candidate label j ,

$$\Pr(y = j|x) = \frac{\Pr(y = j)\Pr(x|y = j)}{\Pr(x)} = \frac{\pi_j P_j(x)}{\Pr(x)}$$

Optimal prediction: the class j with largest $\pi_j P_j(x)$.

Fitting a generative model

Training set of 130 bottles:

- Winery 1: 43 bottles, winery 2: 51 bottles, winery 3: 36 bottles
- For each bottle, 13 features: 'Alcohol', 'Malic acid', 'Ash', 'Alcalinity of ash', 'Magnesium', 'Total phenols', 'Flavanoids', 'Nonflavanoid phenols', 'Proanthocyanins', 'Color intensity', 'Hue', 'OD280/OD315 of diluted wines', 'Proline'

Class weights:

$$\pi_1 = 43/130 = 0.33, \quad \pi_2 = 51/130 = 0.39, \quad \pi_3 = 36/130 = 0.28$$

Need distributions P_1, P_2, P_3 , one per class.

Base these on a single feature: 'Alcohol'.

The univariate Gaussian

The Gaussian $N(\mu, \sigma^2)$ has mean μ , variance σ^2 , and density function

$$p(x) = \frac{1}{(2\pi\sigma^2)^{1/2}} \exp\left(-\frac{(x - \mu)^2}{2\sigma^2}\right).$$

The distribution for winery 1

Single feature: 'Alcohol'

Mean $\mu = 13.72$, Standard deviation $\sigma = 0.44$ (variance 0.20)

All three wineries

- $\pi_1 = 0.33$, $P_1 = N(13.7, 0.20)$
- $\pi_2 = 0.39$, $P_2 = N(12.3, 0.28)$
- $\pi_3 = 0.28$, $P_3 = N(13.2, 0.27)$

To classify x : Pick the j with highest $\pi_j P_j(x)$

Test error: $14/48 = 29\%$
